## THE EXPERIMENT

### THE INFLUENCE OF A CHOSEN ENVIRONMENTAL FACTOR ON THE CONDITION OF CUCKOOFLOWER.

1. Suggest the research problem and state a hypothesis.

---

---

---

---

---

---

---

---

---

2. Necessary equipment: cuckooflower seeds, 2 plates cotton, water, aluminium foil.
3. The process of the experiment: 2 sets are watered with the same amount of water for 7 days.
4. SET A: the plate with sprouting cuckooflower covered with aluminium foil is placed on a window sill.

SET B: the plate with sprouting cuckooflower uncovered is placed on the window sill.

Decide: the control sample is set...../ the research sample is set.....

5. Describe changes observed in the look of cuckooflower in both sets.

Set A	Set B

6. Referring to your observations note the conclusion of the experiment.
